SUMMARY

An Informatics Engineering graduate and QA Engineer with hands-on experience in manual and automation testing for web and API-based systems. Experienced in building automation scripts using Playwright with TypeScript and Selenium WebDriver, as well as API testing using Postman and Swagger.

Skilled in validating system behavior through UI, API, and Chrome DevTools, and experienced in User Acceptance Testing (UAT) to ensure business requirements are met.

Experienced in integrating automation testing into CI/CD pipelines to support continuous testing and faster delivery cycles. Currently exploring mobile automation testing using Appium with Python.

Additionally, developing AI agents to assist in generating test cases automatically, improving testing efficiency and reducing manual effort. Committed to delivering high-quality software through strong analytical skills, test case design, and defect tracking using JIRA within SDLC/STLC environments.

EDUCATION

Indraprasta PGRI University | Informatics Engineering | September 2021 - August 2025

- GPA : 3.20
- Relevant courses: Operating Systems, Information Systems, Computer Assembly, and Visual Programming, Data Mining, Calculus, Algorithms, Website Development.

WORK EXPERIENCE / PROJECT EXPERIENCE

Manual QA Tester — YouApp (Project with GBCI Ventures) | Dec 2025 Travel,
Leisure & Local Experiences

Responsibilities:

- **Led end-to-end quality assurance** across core application features, ensuring release readiness and product stability through structured testing strategy and execution.
- **Reduced production bug escape rate by identifying**, documenting, and tracking 20+ high-impact defects, with detailed reproduction steps, logs, and clear expected vs actual results, improving debugging efficiency.
- **Established and enforced a standardized JIRA defect lifecycle workflow**, improving bug triage accuracy, prioritization consistency, and reducing cross-team resolution time.
- **Strengthened cross-functional alignment between QA, developers, and product stakeholders** by implementing structured test reporting, defect summaries, and weekly QA status updates, improving decision-making speed.
- **Centralized and maintained all QA artifacts (test cases, test execution results, and defect reports)** in a single source of truth (Google Drive), improving transparency, traceability, and audit readiness.

- Executed **structured regression and smoke testing cycles** prior to each release, reducing risk of post-deployment issues and improving production confidence.
- Contributed to **early-stage QA process improvement** by identifying gaps in requirements and proactively adding edge-case test scenarios, increasing overall test coverage quality beyond functional requirements.

QA Engineer — MEPO (PT Kreasi Multi Travelindo) | Dec 2025

Responsibilities:

- Conduct **manual testing** for new and existing features of the **travel platform** to ensure system stability and functionality.
- Perform **API testing using Swagger (Swagger UI) and Postman (REST API, Collection Creation)** to validate **endpoints, request parameters, response structures, and HTTP status codes**.
- Validate **API behavior including authentication, response data consistency, and error handling** across multiple endpoints using **Swagger, Postman, and Chrome DevTools (Network tab)**.
- Create and maintain **test cases and test scenarios** to ensure adequate **test coverage** for newly developed features.
- Execute **regression testing** on new builds before deployment to ensure existing features remain stable.
- Identify, document, and track **software defects using JIRA**, including **reproduction steps, expected vs actual results, and supporting evidence**.
- **Managed and monitored 777+ issue tickets in JIRA**, ensuring proper **bug tracking, prioritization, and coordination with developers** for faster issue resolution.
- Test **frontend slicing implementations** to verify **UI functionality** and ensure alignment with product requirements.
- Collaborate with **developers and product teams in Agile workflows**, including participation in **daily stand-up meetings**.
- Build **performance testing scripts using Grafana K6** to simulate **load testing and API performance** under concurrent user conditions.
- Analyze **performance metrics** such as **response time, throughput, and error rates** to identify system bottlenecks.
- Monitor **API responses and network activity** using **Swagger, Postman, and Chrome DevTools**.
- Develop web automation testing scripts using **Playwright with TypeScript** to improve test efficiency and coverage.
- **Perform User Acceptance Testing (UAT)** to ensure features meet business requirements before release.
- Explore and develop mobile automation testing **using Appium with Python** for Android/iOS applications.
- Integrate automation testing into **CI/CD pipelines to support continuous testing** and faster deployment cycles.
- Develop **AI-based tools/agents** to assist in generating test cases and improving QA productivity.

Manual Quality Assurance (MQA) Certification – Growia (2024)

- **Led end-to-end QA testing for core e-commerce** features by designing and executing 30+ detailed test cases, ensuring comprehensive test coverage.
- **Performed functional, regression, and end-to-end testing** to validate system reliability and business workflows.
- **Designed test scenarios based on SDLC/STLC** methodologies and requirement analysis.
- Identified, documented, and tracked 15+ defects using JIRA, **improving issue visibility and resolution efficiency**.
- Created structured bug reports including reproducible steps, **expected vs actual results, and supporting evidence (screenshots)**.
- Conducted **User Acceptance Testing (UAT)** to ensure features align with business requirements and user expectations.
- **Collaborated with developers** to validate fixes and perform re-testing and regression testing before release.
- Ensured application quality and release readiness through systematic **validation and test documentation**.

UNIVERSITY PROJECT

Interest & Hobby Website (Full-Stack + QA Testing) | January 2025 – July 2025

Project for Final Assignment value

- **Developed a full-stack web application** as a final project.
- Designed and executed test cases and test scenarios to **validate system functionality**.
- **Performed functional and usability testing** to ensure a smooth and user-friendly experience.
- **Identified, documented, and fixed defects** during the testing process.
- **Validated UI behavior and API responses** using browser tools (Chrome DevTools).

Posyandu Disease Determination Application (Manual Testing) | March 2024 – May 2025

- **Designed and executed test scenarios** and test cases based on system requirements.
- **Performed functional and regression testing** across all application modules.
- Identified, documented, and **tracked bugs to ensure system quality**.
- **Validated application workflows** to ensure alignment with business requirements.
- **Collaborated in testing a desktop-based application** developed for final assessment.

SKILLS

Testing Methodology:

Functional Testing, Regression Testing, API Testing, Performance Testing, Load Testing, User Acceptance Testing (UAT), Software Development Life Cycle (SDLC), Software Testing Life Cycle (STLC)

Test Automation:

Selenium WebDriver (Java) Playwright (TypeScript)

API Testing Tools:

Swagger (Swagger UI), Postman (REST API, Collection Creation)

Performance Testing Tools:

Grafana K6 (JavaScript)

Test & Bug Management:

JIRA (Epic, Story, Bug Tracking), Microsoft Excel, Google Sheets

Programming / Scripting:

Java, JavaScript, TypeScript, Python, HTML, CSS

Additional / Emerging Skills:

Appium (Python – Mobile Automation, Currently Learning), CI/CD Integration (Automation Testing Pipeline), AI-assisted Testing (Test Case Generation, Automation Support)

Languages:

Indonesian (Native), English (Professional Working Proficiency)
